Report for ForestQuery into Global Deforestation, 1990 to 2016

ForestQuery is on a mission to combat deforestation around the world and to raise awareness about this topic and its impact on the environment. The data analysis team at ForestQuery has obtained data from the World Bank that includes forest area and total land area by country and year from 1990 to 2016, as well as a table of countries and the regions to which they belong.

The data analysis team has used SQL to bring these tables together and to query them in an effort to find areas of concern as well as areas that present an opportunity to learn from successes.

1. GLOBAL SITUATION

According to the World Bank, the total forest area of the world was 41282694.9 sq km in 1990. As of 2016, the most recent year for which data was available, that number had fallen to 39958245.9 sq km, a loss of 1324449 sq km, or 1.04%.

The forest area lost over this time period is slightly more than the entire land area of 1279999.9891 sq km listed for the year 2016 (which is Peru).

2. **REGIONAL OUTLOOK**

In 2016, the percent of the total land area of the world designated as forest was 31.38%. The region with the highest relative forestation was Latin America & Caribbean, with 46.16%, and the region with the lowest relative forestation was Middle East & North Africa, with 2.07% forestation.

In 1990, the percent of the total land area of the world designated as forest was 32.42%. The region with the highest relative forestation was Latin America & Caribbean, with 51.03%, and the region with the lowest relative forestation was Middle East & North Africa, with 1.78% forestation.

Table 2.1: Percent Forest Area by Region, 1990 & 2016:

Region	1990 Forest Percentage 2016 Forest Percentage		
Latin America & Caribbean	51.03	46.16	
Sub-Saharan Africa	30.67	28.79	
Europe & Central Asia	37.28	38.04	
East Asia & Pacific	25.78	26.36	
South Asia	16.51	17.51	
Middle East & North Africa	1.78	2.07	
World	32.42	31.38	
North America	35.65	36.04	

The only regions of the world that decreased in percent forest area from 1990 to 2016 were Latin America & Caribbean (dropped from 51.03% to 46.16%) and Sub-Saharan Africa (30.67% to 28.79%). All other regions actually increased in forest area over this time period. However, the drop in forest area in the two aforementioned regions was so large, the percent forest area of the world decreased over this time period from 32.42% to 31.38%.

3. COUNTRY-LEVEL DETAIL

A. SUCCESS STORIES

There is one particularly bright spot in the data at the country level, China. This country actually increased in forest area from 1990 to 2016 by 527229.062 sq km. It would be interesting to study what has changed in this country over this time to drive this figure in the data higher. The country with the next largest increase in forest area from 1990 to 2016 was the United States, but it only saw an increase of 79200 sq km, much lower than the figure for China.

Russian Federation and China are of course very large countries in total land area, so when we look at the largest *percent* change in forest area from 1990 to 2016, we aren't surprised to find a much smaller country listed at the top. Iceland increased in forest area by -213.66% from 1990 to 2016.

B. LARGEST CONCERNS

Which countries are seeing deforestation to the largest degree? We can answer this question in two ways. First, we can look at the absolute square kilometer decrease in forest area from 1990 to 2016. The following 3 countries had the largest decrease in forest area over the time period under consideration:

Table 3.1: Top 5 Amount Decrease in Forest Area by Country, 1990 & 2016:

Country	Region Absolute Forest Area		
Brazil	Latin America & Caribbean	541510	
Indonesia	East Asia & Pacific 282193.9844		
Myanmar	East Asia & Pacific	107234.0039	
Nigeria	Sub-Saharan Africa	106506.00098	
Tanzania	Sub-Saharan Africa	102320	

The second way to consider which countries are of concern is to analyze the data by percent decrease.

Table 3.2: Top 5 Percent Decrease in Forest Area by Country, 1990 & 2016:

Country	Region Pct Forest Area Ch		
Тодо	Sub-Saharan Africa	75.45	
Nigeria	Sub-Saharan Africa 61.80		
Uganda	Sub-Saharan Africa	59.13	
Mauritania	Sub-Saharan Africa	46.75	
Honduras	Latin America & Caribbean	45.03	

When we consider countries that decreased in forest area percentage the most between 1990 and 2016, we find that four of the top 5 countries on the list are in the region of Sub-Saharan Africa. The countries are Togo, Nigeria, Uganda and Mauritania. The 5th country on the list Honduras, which is in the Latin America & Caribbean region.

From the above analysis, we see that Nigeria is the only country that ranks in the top 5 both in terms of absolute square kilometer decrease in forest as well as percent decrease in forest area from 1990 to 2016. Therefore, this country has a significant opportunity ahead to stop the decline and hopefully spearhead remedial efforts.

C. QUARTILES

Table 3.3: Count of Countries Grouped by Forestation Percent Quartiles, 2016:

Quartile	Number of Countries
4 th Quartile 75-100%	9
3 rd Quartile 50-75%	38
2 nd Quartile 25-50%	72
1 st Quartile 0-25%	85

The largest number of countries in 2016 were found in the 1st quartile.

There were 9 countries in the top quartile in 2016. These are countries with a very high percentage of their land area designated as forest. The following is a list of countries and their respective forest land, denoted as a percentage.

Table 3.4: Top Quartile Countries, 2016:

Country	Region	Pct Designated as Forest	
Suriname	Latin America & Caribbean	98.26	
Micronesia, Fed. Sts.	East Asia & Pacific	91.86	
Gabon	Sub-Saharan Africa	90.04	
Seychelles	Sub-Saharan Africa	88.41	
Palau	East Asia & Pacific	87.61	

American Samoa	East Asia & Pacific	87.50
Guyana	Latin America & Caribbean	83.90
Lao PDR	East Asia & Pacific	82.11
Solomon Islands	East Asia & Pacific	77.86

4. RECOMMENDATIONS

Write out a set of recommendations as an analyst on the ForestQuery team.

- What have you learned from the World Bank data?
- Which countries should we focus on over others?

The analysis from the Global situation points us toward the direction that the situation is frightening. The percent change and total forest area of the world from 1990 to 2016 is decreasing as the years moving forward. The deforestation rate is increasing. When focusing on region level, 5 regions out of 7 have an increase in forest area from 1990 to 2016 which is a positive aspect to look for. The 2 regions which are Latin America and Caribbean and SubSaharan Africa are the ones where deforestation occurred from 1990 to 2016, which shows a

substantial decrease in percent rate of forest area of world. Based on Country level, China and United States showed an increase in forest area from 1990 to 2016.

The countries which are in the region of Sub-Saharan Africa and Latin America and Caribbean, we should focus more on. Based on what is left of forest area in those countries, there should be preventive measures that will decrease or stop the loss of remaining forest area. Then plans of reforestation should be placed such as planting trees, going paperless or use less paper, recycling or buying recycled products etc. These countries should follow the measures which were taken by China who has shown an increase in forest area.
